

Directions to Download and Run Training Technology Products

Click on the "Zip Download" link to initiate the download sequence.

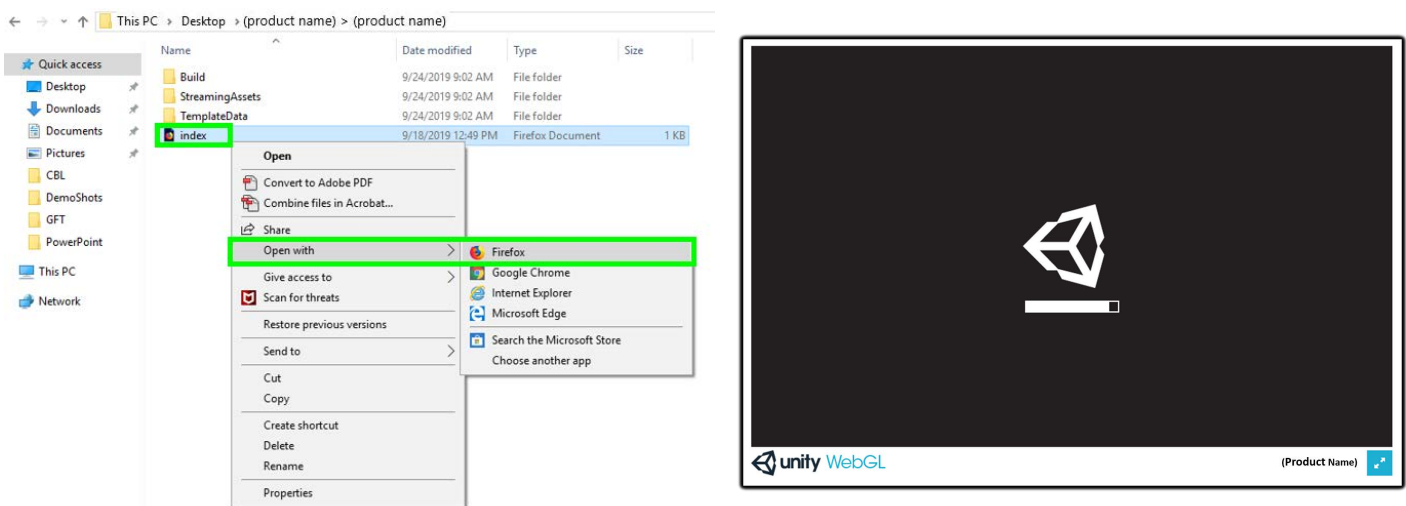

1. Select "Save as" and choose "Desktop" as the location where you would like to save the zipped folder.

2. Once the download is complete, close the current window and find the "(product name)" zipped folder on the Desktop. Once you have located the zipped folder, click on the "Extract" tab and then select "Extract All". **Note: Ensure the "show extracted files when complete" tab is engaged with a check mark (it should be by default).**

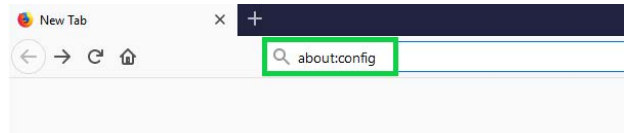

3. Once the files are extracted, open the unzipped "(product name)" folder on your desktop then double-click within the "(product name)" folder to run. Right-click on the "HTML File" and select "open with Firefox". **ALL 3D SIMULATIONS MUST BE OPENED WITH Firefox** and will initiate with the below depicted "unity WebGL" load screen (load time based on complexity of simulation).

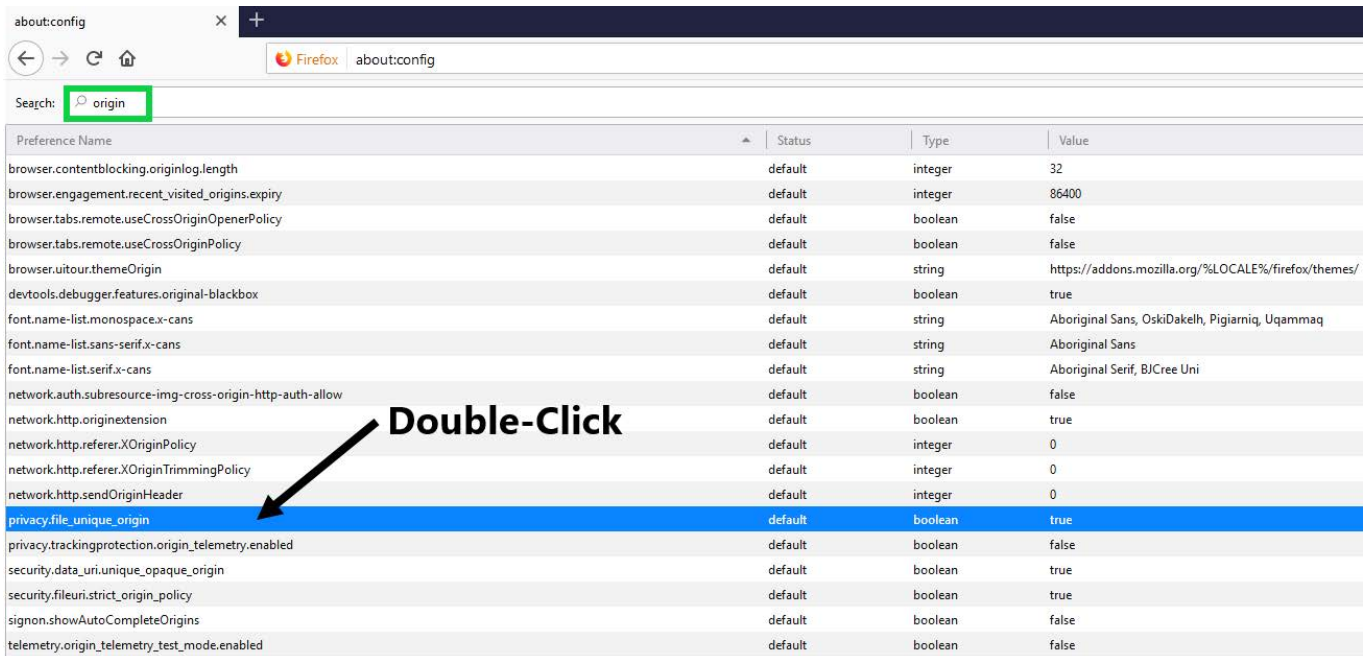

4. If you receive the following **error message** after opening with Firefox: *"It seems your browser does not support running Unity WebGL content from file:// urls. Please upload it to an http server, or try a different browser."* Complete the two (2) steps on the following page to correctly configure Firefox for 3D playability.

Directions to Configure Firefox for 3D IMI Playability

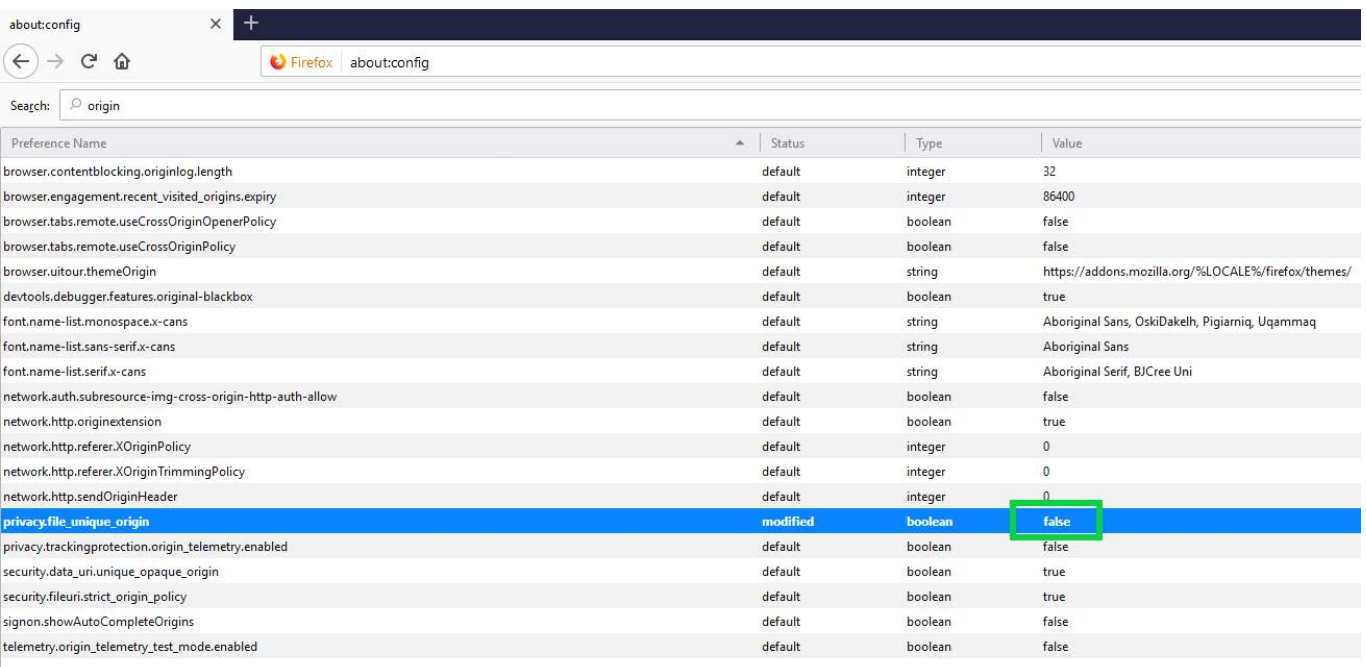

1. Open Firefox and type "about:config" (no spaces) in the search browser as depicted below.

2. Type "origin" in the Search browser and double-click "privacy.file_unique_origin" to change value from "true" to "false" as depicted below. Firefox is now configured for 3D IMI playability.

A screenshot of the Firefox 'about:config' page. The search bar contains 'origin'. A table lists various preferences. The row for 'privacy.file_unique_origin' is highlighted in blue. An arrow points to this row with the text 'Double-Click'.

Preference Name	Status	Type	Value
browser.contentblocking.originlog.length	default	integer	32
browser.engagement.recent_visited_origins.expiry	default	integer	86400
browser.tabs.remote.useCrossOriginOpenerPolicy	default	boolean	false
browser.tabs.remote.useCrossOriginPolicy	default	boolean	false
browser.uitour.themeOrigin	default	string	https://addons.mozilla.org/%LOCALE%/firefox/themes/
devtools.debugger.features.original-blackbox	default	boolean	true
font.name-list.monospace-x-cans	default	string	Aboriginal Sans, OskiDakelh, Pigiarniq, Uqammaq
font.name-list.sans-serif-x-cans	default	string	Aboriginal Sans
font.name-list.serif-x-cans	default	string	Aboriginal Serif, BJCree Uni
network.auth.subresource-img-cross-origin-http-auth-allow	default	boolean	false
network.http.originextension	default	boolean	true
network.http.referer.XOriginPolicy	default	integer	0
network.http.referer.XOriginTrimmingPolicy	default	integer	0
network.http.sendOriginHeader	default	integer	0
privacy.file_unique_origin	default	boolean	true
privacy.trackingprotection.origin_telemetry.enabled	default	boolean	false
security.data_uri.unique_opaque_origin	default	boolean	true
security.fileuri.strict_origin_policy	default	boolean	true
signon.showAutoCompleteOrigins	default	boolean	false
telemetry.origin_telemetry_test_mode.enabled	default	boolean	false

A screenshot of the Firefox 'about:config' page, similar to the previous one, but the value for 'privacy.file_unique_origin' is now 'false', which is highlighted with a green box. The status for this preference is now 'modified'.

Preference Name	Status	Type	Value
browser.contentblocking.originlog.length	default	integer	32
browser.engagement.recent_visited_origins.expiry	default	integer	86400
browser.tabs.remote.useCrossOriginOpenerPolicy	default	boolean	false
browser.tabs.remote.useCrossOriginPolicy	default	boolean	false
browser.uitour.themeOrigin	default	string	https://addons.mozilla.org/%LOCALE%/firefox/themes/
devtools.debugger.features.original-blackbox	default	boolean	true
